

GLOBAL BANKING LEADER SELECTS VERSITY FOR ARCHIVING

SOLUTION FOCUS

- Financial Sector
- NetBackup Archiving
- Object and tape hybrid solution

CHALLENGE

- Regulatory compliance
- WORM
- Archive without changes to workflow

KEY BENEFITS

- Automatic tiering to both tape and private cloud (object)
- 'Plugin' to NetBackup with no special modifications
- WORM capability
- Reduced number of tape drives
- Direct customer support
- Strong product roadmap

Learn why one of the top 50 banks in the world selected Versity to archive data and improved their NetBackup data backup and recovery workflow

Overview

A diversified global banking and financial services firm selected the Versity solution to protect its mission critical financial data. The bank is a leading commercial bank focused on trade finance, business and institutional customers. Present in more than 60 countries around the world with over 50,000 employees, the volume of backup and archival data is immense and growing rapidly.

The Challenge

The bank utilizes NetBackup to capture full and incremental backups from over 5,000 servers, but due to the high volume of data generated and strict regulatory requirements for data retention, the bank needed a higher performing data storage solution as a target for the Netbackup software. They searched for a solution that would utilize their tape hardware more fully and effectively while supporting strict compliance requirements for file retention and immutability (WORM). A key requirement for the solution was a seamless integration with the existing NetBackup application and workflow.

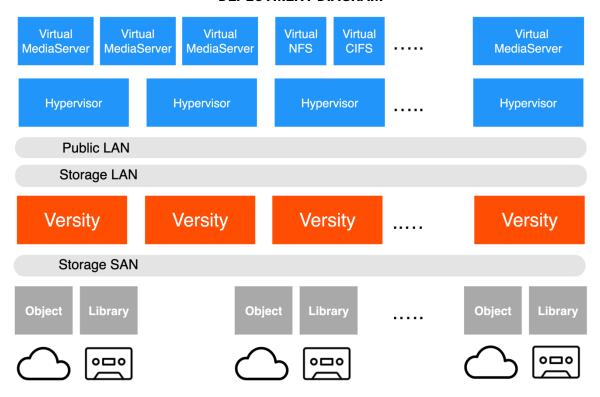

"Versity enabled us to keep our workflow exactly the same while dramatically increasing performance and reducing the number of tape drives."

The bank selected Versity for their data archiving solution after evaluating all of the major archive software vendors. The Versity solution was a perfect fit for resolving the banks large scale data storage challenges. The solution was implemented as a hybrid tape and on-premise object storage solution to improve the overall data management workflows, increase speed and achieve the lowest possible cost per GB.

The Solution

The bank elected to deploy both on premise object storage and tape together to achieve an optimal mix of cost and performance. NetBackup writes out large data sets, along with small catalog files that contain information about the larger data sets. A single backup is therefore comprised of many large data sets and also many smaller catalog files. This mixture of large and small files is common in many large archive verticals and is particularly challenging for products that struggle with small file performance. By configuring the Versity solution to automatically sort, group,

DEPLOYMENT DIAGRAM

and store the smaller catalog files on the object storage system, while writing the larger files to tape, the bank was able to gain dramatic improvements in efficiency without changing their workflow. Faster time to first byte on the object copies saved valuable time when running file retention checks. Versity supports both object and tape from the same file interface, so cloud copies are supported without the addition of special gateways or object protocols.

Solution Recap

With the Versity solution deployed the bank was able to maintain its existing backup software and workflow, speed up file retention checks, and dramatically improve tape handling efficiency. The number of tape drives in one data center was reduced by more than 50% after directing Netbackup writes to a Versity mount point instead of sending Netbackup data directly to the tape library. Even with fewer tape drives, read and write performance from each tape library was improved. The bank was able to deploy Versity's software defined storage on commodity hardware without any disruption to existing tape or private cloud infrastructure. The bank is pleased with Versity's direct engineering support model, which gives them direct access to knowledgeable engineers who are available to talk to about archiving issues and provide product support.

About Versity

Versity is the leading global independent provider of scalable, modular, and efficient mass storage and large archive systems. Organizations leverage Versity's Scale Out Archive Manager (ScoutAM) to implement data preservation strategies for long-term storage, and retrieval of massive data stores, both on-premises and in the cloud. Versity currently manages over 1 Exabyte of archival storage across a global customer base including leading public and private entities in defense, financial services, education, research, aerospace, energy, entertainment, telecommunications, consumer technology, and publishing. Versity is a privately held company founded in 2011 and headquartered in Hood River, Oregon. For more information visit www.versity.com.
